THIRTEEN

Destination Architecture & AI Studio Build Instruction

Implementation specification • English-only public website

1. Objective

Update the existing THIRTEEN website in place. Do not rebuild the project from scratch. Implement a clear regional destination hierarchy with Bali and Java as the only top-level regions. Bali remains a regional landing page, not a destination card equivalent to its own subdestinations.

2. Approved destination hierarchy

```
DESTINATIONS
├── BALI  [Regional landing page]
│   ├── Canggu
│   ├── Pecatu
│   ├── Ubud
│   ├── Kintamani
│   └── Nusa Penida
│
└── JAVA  [Regional landing page]
    ├── Mount Bromo
    ├── Ijen Crater
    ├── Yogyakarta
    ├── Pulau Merah
    ├── Tumpak Sewu Waterfall
    ├── Meru Betiri National Park
    └── Baluran National Park
```

The original eight approved primary destinations remain represented: Bali, Mount Bromo, Ijen Crater, Yogyakarta, Pulau Merah, Tumpak Sewu Waterfall, Meru Betiri National Park, and Baluran National Park. The five Bali locations are additional subdestinations; they do not replace any approved destination.

3. Required page and route structure

Route	Purpose
/destinations	Destination directory; shows only two regional entry cards: Bali and Java.
/destinations/bali	Bali regional landing page; introduces Bali and presents five subdestination cards.
/destinations/bali/canggu	Canggu destination detail page.
/destinations/bali/pecatu	Pecatu destination detail page.
/destinations/bali/ubud	Ubud destination detail page.
/destinations/bali/kintamani	Kintamani destination detail page.
/destinations/bali/nusa-penida	Nusa Penida destination detail page.

/destinations/java	Java regional landing page; presents seven Java destination cards.
/destinations/java/mount-bromo	Mount Bromo destination detail page.
/destinations/java/ijen-crater	Ijen Crater destination detail page.
/destinations/java/yogyakarta	Yogyakarta destination detail page.
/destinations/java/pulau-merah	Pulau Merah destination detail page.
/destinations/java/tumpak-sewu	Tumpak Sewu Waterfall destination detail page.
/destinations/java/meru-betiri	Meru Betiri National Park destination detail page.
/destinations/java/baluran	Baluran National Park destination detail page.

4. Destination directory behaviour

- The /destinations page must show exactly two top-level cards: Bali and Java. Do not show Bali and its five subdestinations as peers on this page.
- The Bali page shows five subdestination cards: Canggu, Pecatu, Ubud, Kintamani, and Nusa Penida.
- The Java page shows seven destination cards: Mount Bromo, Ijen Crater, Yogyakarta, Pulau Merah, Tumpak Sewu Waterfall, Meru Betiri National Park, and Baluran National Park.
- Every card must have relevant imagery, a concise unique English description, and a working detail-page link.
- Use breadcrumbs such as Home > Destinations > Bali > Ubud and Home > Destinations > Java > Mount Bromo.
- Include a clear Plan Your Journey call to action on regional and detail pages.
- Avoid empty pages, duplicate generic descriptions, dead links, empty grid slots, and internal development labels such as Expansion Phase or Catalog Development.

5. Remove Lombok completely

Lombok is not an approved destination. Remove all Lombok-related public content and references across the project, including cards, page routes, trip and itinerary data, promotional images, captions, alt text, tour references, homepage sections, footer links, guides, FAQs, search/filter options, inquiry selectors, SEO metadata, structured data, mock records, and internal links. Remove associated Gili Islands or Mount Rinjani promotional content when it belongs to Lombok products. Replace Lombok imagery in shared layouts with relevant approved Bali or Java imagery. Do not retain Lombok as a future, expansion, or disabled destination. Do not delete unrelated content merely because a word matches.

6. Public website rules

- Public-facing content must be in professional English only.
- Do not display tour prices, USD or IDR amounts, deposits, percentage deposits, or currency conversion controls on public pages.
- Keep quotation and inquiry functionality. Use Plan Your Journey or Request a Personalized Quote.
- Retain the premium editorial design: warm ivory, controlled forest-green accents, elegant serif headings, readable sans-serif body text, authentic photography, and consistent responsive cards.
- Present THIRTEEN as the public-facing brand; do not expose development tools or admin controls in public navigation.
- Do not invent tour availability, partner credentials, permits, certifications, prices, guarantees, inclusions, or contact details.
- Preserve actual CRM and inquiry functionality, but do not claim an integration works unless verified.

7. Data model guidance

```
Region
- id
- name: Bali | Java
- slug
- description
- heroImage

Destination
- id
- regionId
- name
- slug
- shortDescription
- longDescription
- heroImage
- galleryImages
- experiences
- practicalInformation (verified content only)
- seoTitle
- seoDescription
- isPublished

Use regionId to associate each destination with Bali or Java. Bali and Java are regional landing
pages, not duplicate destination cards in their own child grids. Use one source of catalogue data so
homepage, destination pages, filters, inquiry form, breadcrumbs, and SEO metadata remain consistent.
```

8. Inquiry form and CRM

Update the journey-planning form so customers can select one or multiple approved destinations. The destination selector must include the eight approved primary destinations and the five additional Bali subdestinations. Where practical, retain the selected destination when a visitor opens the inquiry form from a destination page. Keep internal costing data private. Do not expose CRM records or internal notes to public visitors.

9. Implementation and acceptance checklist

- Implement directly in the existing project; do not stop at an audit or plan.
- The destination directory shows only Bali and Java as top-level cards.
- Bali regional page contains the five approved Bali subdestinations.
- Java regional page contains all seven approved Java destinations.
- All eight approved primary destinations remain represented.
- All regional and detail routes work and breadcrumbs are correct.
- No Lombok or related promotional content remains in the public website.
- Public-facing UI is English-only and has no displayed tour prices or monetary amounts.
- The inquiry form supports the updated destination list.
- Responsive layouts work on mobile, tablet, and desktop.
- Verify actual routes and interactions; report untested or blocked items honestly.

10. Copy-paste execution prompt

Implement the THIRTEEN Destination Architecture specification directly in the existing project.

Do not rebuild the site from scratch and do not stop after writing a plan. Use the approved two-region hierarchy: Bali and Java. Make /destinations show only the Bali and Java regional cards. Make the Bali page show Canggu, Pecatu, Ubud, Kintamani, and Nusa Penida. Make the Java page show Mount Bromo, Ijen Crater, Yogyakarta, Pulau Merah, Tumpak Sewu Waterfall, Meru Betiri National Park, and Baluran National Park.

Preserve all eight approved primary destinations. Remove Lombok and all associated trip, image, route, guide, SEO, and promotional references from the public project. Keep the public website English-only and remove all public tour prices and monetary amounts. Preserve the existing premium editorial visual direction and working CRM/inquiry functionality. Update routes, breadcrumbs, homepage links, destination selectors, filters, and metadata from one consistent source of catalogue data. Test every affected route and report actual results and remaining blockers.
